

Senior Acoustic Consultant Bristol

MACH Thinks Differently, not only in our sustainable, research led approach to building design but also in the way our staff work. We provide the freedom, encouragement, responsibility, and recognition to our staff, which in turn results in a reputation for thinking differently.

This difference has led MACH to become the first acoustics led, multi-disciplined consultancy. We have a strong passion for low carbon design, and so, in addition to typical sectors of building design, we have crafted a unique blend of Acoustics and Building Physics which we can offer to our clients. This has been very successful and so we are looking for an experienced building acoustic consultant to join our team and share in this success. If desired, you can branch out and learn aspects of building physics from our team of engineers to understand the relationship it has with acoustics. Being an SME you will sit among the directors, where your input into MACH will be seen and recognised. Opportunities will also be available to work on product development, to support MSc Students, to teach at a range of universities, or get involved and learn about other areas of the business.

We aim to provide higher than average pay with significantly higher than average potential to develop. Therefore, if you are looking for space to express yourself, be supported by highly knowledgeable staff, learn more, be challenged but also supported, then please apply for a Senior Acoustic position to be based in or around our Bristol offices.

Please contact Jobs@machacoustics.com with the subject "Senior Acoustic Consultant".

We look forward to hearing from you.
